Internet & SaaS (ZIA)

Recommended URL & Cloud App Control Policy

This article contains the recommended policy for URL Filtering and Cloud App Control.

URL Filtering

Zscaler recommends that you configure the following for URL Filtering policy:

- **Rule Order**: Select a Rule Order that is appropriate for your organization. Rules are evaluated in ascending numerical order (Rule 1 before Rule 2, and so on).
- **Rule Status**: Select **Enabled**. Enabled rules are actively enforced.
- **URL Categories**: Select all categories in the **Legal Liability** class. To see which URL categories are in the Legal Liability class, see About URL Categories.
- **HTTP Requests**: Select **All** so that the rule is applied to all HTTP requests.
- **Users**: Select **Any** to apply the rule to all users.
- **Groups**: Select **Any** to apply the rule to all groups.
- **Departments**: Select **Any** to apply the rule to all departments.
- **Locations**: Select **Any** to apply the rule to all locations.
- **Location Groups**: Select **Any** to apply the rule to all location groups.
- **Time**: Select **Always** to apply the rule to all time intervals.
- **Protocols**: Select **HTTP** and **HTTPS** to apply the rule to these two protocols.
- **Action**: Select **Block** to block access to all sites in the selected URL categories.

Advanced Policy Settings

Zscaler recommends that you configure the following in the Advanced Policy Settings.

- **Enable Suspicious New Domains Lookup**: Select **Enable**. This enables you to use the Newly Registered and Observed Domains URL category in your URL Filtering policy.
- **Enable AI/ML based Content Categorization**: Select **Enable**. This enables the service to analyze the content of uncategorized websites using AI/ML tools to check if they belong to one of these URL categories:

URL Categories	URL Super Categories
Alcohol/Tobacco	Society and Lifestyle
Anonymizer	Illegal or Questionable

©2026 Zscaler, Inc. All rights reserved.

URL Categories	URL Super Categories
Art/Culture	Society and Lifestyle
Blogs	Internet Communication
Classifieds	Business and Economy
Continuing Education/College	Education
Dining/Restaurant	Society and Lifestyle
FileHost	Information Technology
Finance	Business and Economy
Gambling	Gambling
Government	Government and Politics
Health	Health
Job/Employment Search	Job/Employment Search
K-12	Education
Online and Other Games	Games
Online Auctions	Shopping and Auctions
Online Shopping	Shopping and Auctions
Other Adult Material	Adult Material
Other Drugs	Drugs
Other Religion	Religion
Radio Stations	Entertainment/Recreation
Real Estate	Shopping and Auctions
Social Networking	Society and Lifestyle

Sports	Sports
Travel	Travel
Vehicles	Vehicles

©2026 Zscaler, Inc. All rights reserved.

URL Categories	URL Super Categories
Weapons/Bombs	Weapons/Bombs
Webmail	Internet Communication

If the service determines the site belongs in one of those categories, it will categorize those sites and apply your policy accordingly.

- **Enable Embedded Sites Categorization**: Select **Disable**. With this disabled, the service won't enforce the URL Filtering policy for sites that are translated using translation service websites.
- **Enforce SafeSearch**: Select **Enable**. The following drop-down field appears when this option is enabled:
  SafeSearch Applications: Select **Any** to return safe content from searches on AOL, Bing Search, Dailymotion, DuckDuckGo, Flickr, Google, Yahoo, and YouTube. SSL/TLS Inspection must be enabled for this option.
- **Enable Creative Commons Search Results**: Select **Enable**. This enables the service to return only Creative Commons search content from certain search engines (e.g., Bing, Google, and Yahoo).

Generative AI Prompt Configuration

When using Amazon Q, be aware that Zscaler and AWS are technology partners. For more information on the Zscaler and Amazon Q integration, see the Zscaler and AWS Deployment Guide.

Zscaler recommends that you configure the following in the Advanced Policy Settings:

- **ChatGPT**: Select **Enable**. This enables the service to categorize and store prompts entered on ChatGPT.
- **Microsoft Copilot**: Select **Enable**. This enables the service to categorize and store prompts entered on Microsoft Copilot.
- **Gemini**: Select **Enable**. This enables the service to categorize and store prompts entered on Gemini.
- **Perplexity**: Select **Enable**. This enables the service to categorize and store prompts entered on Perplexity.
- **Poe**: Select **Enable**. This enables the service to categorize and store prompts entered on Poe.
- **Meta AI**: Select **Enable**. This enables the service to categorize and store prompts entered on Meta AI.
- **WRITER**: Select **Enable**. This enables the service to categorize and store prompts entered on WRITER.

©2026 Zscaler, Inc. All rights reserved.

- **DeepSeek**: Select **Enable**. This enables the service to categorize and store prompts entered on DeepSeek.
- **Grok AI**: Select **Enable**. This enables the service to categorize and store prompts entered on Grok AI.
- **Claude**: Select **Enable**. This enables the service to categorize and store prompts entered on Claude.
- **Mistral**: Select **Enable**. This enables the service to categorize and store prompts entered on Mistral.
- **Grammarly**: Select **Enable**. This enables the service to categorize and store prompts entered on Grammarly.
- **QuillBot**: Select **Enable**. This enables the service to categorize and store prompts entered on QuillBot.
- **Google AI**: Select **Enable**. This enables the service to categorize and store prompts entered on Google AI.

Cloud App Control

Configure your Cloud App Control policy based on your corporate policy.
